In addition, the solutions will be prepared in accordance with cbse's updated curriculum and guidelines. DOWNLOAD 18. You will also understand the role that hormones play in the changes that your child grows into an adult. Read ncert class 8 10 10 notes as follows: What is adolescence? The period of life, when the body changes, which leads to reproductive maturity, is called adolescence. It starts around the age of 11 and lasts until the age of 18 or 19. What is puberty? This is the process of physical change through which the child matures into an adult. After puberty, boys and girls are able to reproduce. Changes in puberty Boys and girls undergo certain physical changes during puberty. These are: Height increaseHanging of body shapeHanging of the genitalsIn the development of mental, mental and emotional maturityIn increased activity of sweat and sebaceous glands What are the secondary sexual characters? Features that help distinguish the male from the female are called secondary sexual characters. Example: In girls, breasts begin to form at puberty, and boys begin to grow hair, i.e. moustache and beard. Hormones: These are chemicals that regulate changes in the body occurring during adolescence. Menstruation: If fertilization does not occur in women, the released egg and thickened lining of the uterus with blood vessels fall out. This causes bleeding in the woman, which is called menstruation. Menarche: The first menstrual flow begins at puberty. It's called menarche. Menopause: Stopping the menstrual cycle is called menopause. This occurs in women aged 45-50 years. Chromosomes: Fibre-like structures are present in fertilized eggs or igots. They are responsible for determining the sex of the body and are called chromosomes. Each person has 23 pairs of chromosomes. Balanced diet: A balanced diet means foods that contain proteins, carbohydrates, fats and vitamins in the necessary proportions. Since adolescence is a stage of rapid development, they need to maintain a properly balanced diet. FAQs for NCERT solutions for Chapter 10 of Class 8 Science Here we asked some frequently asked questions about the chapter: Q1: Prepare a table depicting two columns depicting the names of endocrine glands and hormones. A: The table is Q2: What are sex hormones? Why did they call them that? Enter its function A: Chemicals produced by the genitals are called sex hormones. For example, in women, the sex hormones produced by the ovary are called estrogen, and in men the sex hormones produced by the testicles are called testosterone. Some of the functions performed by sex hormones are:Estrogen: This hormone is responsible for the development of secondary sexual characters in women, such as enlargement of the breasts, development of female genitalia, etc. Testosterone: This hormone brings the secondary sex character to boys, such as the growth of the beard, the voice becomes stranded, the development of reproductive organs, etc. NCERT Class 8 Science Chapter 10 focuses mainly on adolescence.
